Abstract: Triazine is the chemical species of six-membered heterocyclic ring compound with three nitrogens replacing carbon-hydrogen units in the benzene ring structure. The names of the three isomers indicate which of the carbon- hydrogen units in the benzene ring position of the molecules have been replaced by nitrogens called 1,2,3-triazines. The triazine derivative of 1-(4-p-toluidino)-6-(diphenylamino)-1,3,5-triazine-2-yl)-3-methyl-2,6-diphenylpiperidine-4-one was synthesized by condensation method by using various amines. The final synthesized compound structure elucidated by spectral analysis and screened for antibacterial and antifungal activity using different strains of bacteria and fungi by turbidometric method at different concentration. Result showed marked anti-bacterial and anti-fungal activity with increasing the concentration and 250 µg revealed equal to standard drug ciprofloxacin in antibacterial activity.

Keywords: Triazine, Diphenylamine, spectral analysis, anti-microbial and anti-fungal.

Introduction¹-⁴:

Triazine is the chemical species of six-membered heterocyclic ring compound with three nitrogens replacing carbon-hydrogen units in the benzene ring structure. The names of the three isomers indicate which of the carbon- hydrogen units in the benzene ring position of the molecules have been replaced by nitrogens called 1,2,3-triazines.1,2,4-triazines and 1,3,5-triazine respectively.
Materials and Methods:

Scheme of the work:

Step 1: Synthesis of 4,6-dichloro-N-p-tolyl-1,3,5-triazine-2-amine.

\[
\begin{align*}
\text{Cyanuric Chloride} & \quad \text{p-methyl aniline} \\
\begin{array}{c}
\text{Cl} \\
\text{Cl} \\
\text{N} \\
\text{N} \\
\text{N} \\
\end{array} & \quad \begin{array}{c}
\text{NH}_2 \\
\text{CH}_3 \\
\end{array} \\
\text{Cl} & \quad \text{Cl} \\
\ 
\end{align*}
\]

The Chlorine atom of 2, 4, 6-trichloro-1, 3, 5-triazine was replaced by nucleophillic reagent eg. P-methylaniline. 4,6-dichloro-N-p-tolyl-1,3,5-triazine-2-amine has been prepared by treating 2,4,6-trichloro-1,3,5-triazine in acetone with p-methylaniline at 0-5°C and stirring for 4 hrs.

Step 2: Synthesis of 1-(4-(p-toluidino)-6-chloro-1,3,5-triazine-2-yl)-3-methyl-2,6-diphenylpiperidine-4-one.

\[
\begin{align*}
\text{4,6-dichloro-N-p-tolyl-1,3,5-triazine-2-amine} & \quad \text{3-methyl-2,6-diphenylpiperidine-4-one} \\
\begin{array}{c}
\text{Cl} \\
\text{N} \\
\text{N} \\
\text{N} \\
\text{NH} \\
\text{CH}_3 \\
\end{array} & \quad \begin{array}{c}
\text{O} \\
\text{N} \\
\text{C} \\
\text{H} \\
\text{H} \\
\end{array} \\
\end{align*}
\]

1-(4-(p-toludino)-6-chloro-1,3,5-triazine-2-yl)-3-methyl-2,6-diphenylpiperidine-4-one has been prepared by treating 4,6-dichloro-N-p-tolyl-1,3,5-triazine-2-amine in acetone with 3-methyl-2,6-diphenylpiperidine-4-one.
Step 3: Synthesis of 1-(4-p-toluidino)-6-(diphenylamino)-1,3,5-triazine-2-yl)-3-methyl-2,6-diphenylpiperidine-4-one.

\[\text{Compound } - 2 \quad (1-(4-(p-toluidino)-6-chloro-1,3,5-triazine-2-yl)-3-methyl-2,6-diphenylpiperidine-4-one) \] (0.01 mole) was dissolved in acetone (50 ml) then it was added to Diphenylamine (0.01 mole) in acetone (50 ml) and contents are to be stirred for 3 hours at 85-90°C poured into ice water and neutralized with sodium carbonate solution to get the product. Then it was filtered, washed, dried, and recrystallized from ethanol.

Physical characterization:
- Molecular formula : C₄₀H₃₆N₆O
- Molecular weight (gm) : 616.75
- Soluble in Methanol, Ethanol, DMSO and DMF.
- Melting point : 205°C
- Melting points were determined using Veego Digital melting point apparatus.
- The purity of synthesis compound was monitored on TLC.
- Absorbent used : Precoated Silica gel- G plate
- Mobile Phase : Chloroform : Methanol (3:7)
- Rf value: 0.71

Biological screening

Antibacterial activity

The synthesized compounds were screened for *in vitro* antimicrobial activity by Turbidimetric method. This method was used for determining the selective effectiveness of the antibacterial activity. The standard antibiotic selected for study of the antibacterial activity was ciprofloxacin. The activity was compared with standard ciprofloxacin drug.
Material Used
Nutrient broth, Sterile borosil boiling test tube, Sterile test tube, Sterile pipettes and Sterile cotton swabs.

Bacteria
In the present study the following bacteria were used.
A. *Escherichia coli* (Gram – ve)
B. *Bacillus subtilius* (Gram + ve)
C. *Staphylococcus aureus* (Gram + ve)

Antifungal activity

**Turbidometric method by using Sabouraud dextrose broth**

The synthesized compounds were screened for *in vitro* antimicrobial activity by Turbidimetric method. This method was used for determining the selective effectiveness of the antifungal activity. The standard antibiotic selected for study of the antifungal activity was ketoconazole. The activity was compared with standard ciprofloxacin drug.

Material Used
Sabouraud dextrose broth, sterile borosil boiling test tube, Sterile test tube, Sterile pipettes and Sterile cotton swabs.

Fungal
In the percent study the following fungi were used.
- *Aspergillus niger*

Spectral analysis

Results and discussion

Synthesis

The present study report the Synthesis of 1, 3, 5-Triazine derivatives. Nucleophilic substitution of Chloro group in Cyanuric chloride was carried out stepwise at different temperature by various amines. The first step involve the substitution of p-methylaniline and the next by 3-methyl-2,6-diphenyl piperidine-4-one. The final chloro group in the synthesized compound-2 was replaced by Diphenylamine. Since the report regarding this compound suggest a good bioactive moiety.

Physical Characterization

Melting point of the synthesize compound was taken in open capillary tubes and was uncorrected and were found to be in the range of 180-240°C.

TLC was performed using precoated silica gel plates of 0.25mm thickness. Eluents used were Chloroform, Methanol (3:7). Spots were visualized in U.V. light.

At room temperature solubility of newly synthesize compound were determined by various organic solvents and it was found that compound were freely soluble in DMSO, DMF, Methanol and Ethanol.

Anti-bacterial activity

The table shows the 250 µg/ml concentration having good antibacterial activity and equal to ciprofloxacin 100 µg/ml compare to other concentration. The compound most effective against gram -ve microorganism compare to gram +ve.

**Conclusion**

In the present study we concluded that the triazine derivative of synthesized compound having good anti-bacterial activity then the antifungal and most effective against gram-ve bacteria.
