**Abstract :** The aim of this research is to know the role of cinnamaldehyde contained in the cinnamon ethanol extract as immunostimulator against *Salmonella enteridis*. Cinnamaldehyde could improve immune system but until now the research about that has not been widely reported. The research used Completely randomized design which consists of 6 groups in curative treatment divided into 4 groups of Balb-c mice infected with amount of bacteria  $0,25 \times 10^8$  cfu/ml administered orally with cinnamaldehyde in different doses were 50, 100, 150, 200 mg/ml consecutively, negative control given no bacteria and positive control only given bacteria. The cinnamaldehyde didn't impact to the expression of CD4, CD8, CD62L T lymphocyte and B220IgD, it means that cinnamaldehyde has no effect as immunostimulator

**Key word :** Herbal, Bacteria, T cell, Immune.
