Sánchez Céspedes Juan Manuel<sup>3</sup>

<sup>1</sup>Environmental Engineering, Master in Environmental Sciences. Jorge Tadeo Lozano University. Bogota Colombia.

<sup>2</sup>Sanitary and Environmental Engineer. Magister en Ingeniería Ambiental. Magister in EnvironmentalEngineering. PhD (Candidate). Associate Professor. Facultad del Medio Ambiente y Recursos Naturales. Universidad Distrital Francisco Jose de Caldas. Director of the research group AQUAFORMAT. Postal Address: Carrera 5 Este No 15 - 82. Avenida Circunvalar Venado de Oro. Bogota D.C. Colombia.

<sup>3</sup>Assistantprofessor. Faculty of Engineering. Universidad Distrital Francisco Jose de Caldas. Bogotá Colombia. GIIRA research group,Colombia.

**Abstract :** This paper presents the evaluation of the best biological treatment choice for harnessing the organic fraction to reduce in this way the difficult situation of waste management in that marketplace using reactors with molasses, manure and yeast. The volume reduction of composting obtained with molasses was 54%, followed by 52% of reduction in the reactor with yeast.

**Keywords :** Waste, composting, production.
