**Abstract**: The present study was aimed to determine the secondary metabolites which is present in methanolic fraction of hydro alcoholic extract of *Nelumbo nucifera*(G) flowers Gas Chromatography Mass spectroscopy (GC-MS) method of analysis. Preliminary phytochemical screening of *N. nucifera* was performed for the identification of the bioactive constituents. Methanolic fraction of HPTLC fingerprint shows three numbers of peaks. Among the observed peaks, Peak No. 2 is having R\(_f\) value 0.88 with area 3542.4. Active constituents of Methanolic fraction of hydro alcoholic extract of *Nelumbo nucifera* analysed by GC-MS. Chromatogram-2 shows 19 numbers of peaks among the observed peaks, 5 peaks have greater area with quinoline structure.
